INDEX TO SUBJECTS

A

Action potential duration, control of, by calcium ions in cardiac Purkinje fibers, 599

Adaptation and facilitation in barnacle photoreceptor, 235

–, light, in retina of honey bee drone *(Apis mellifera, L.)*, role of intracellular calcium and sodium in, 475

Adenosine triphosphate-, orthophosphate-, and UTP-promoted ouabain binding to reconstituted human red blood cell ghosts, comparison of side-dependent effects of Na and K on, 527

Aggregates, embryonic, chick heart cell, ultraviolet-induced alterations of beat rate and electrical properties of, 27

Amacrine, horizontal, and bipolar cells, and receptors, intracellular analysis of chloride-sensitive electrogenic properties of, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 639

Ammonia ion, CO_2, and metabolic inhibitors, intracellular pH transients in squid giant axons caused by, 91

Ammonium ions, long chain quaternary, inactivation produced by, inactivation of monazomycin-induced voltage-dependent conductance in thin lipid membranes, 703

Apis mellifera, L., honey bee drone, role of intracellular calcium and sodium in light adaptation in retina of, 475

Aplysia, identified neurosecretory cell R15 of, water regulation by presumptive hormone contained in, 113

–, patterns of proteins synthesized in R15 neuron of, temporal studies and evidence for processing, 691

Arterial branching, role of shear forces in, 213

Axon membrane fragments isolated from lobster nerves, sodium flux through sodium channels of, 81

Axons, *Myxicola* giant, sensitivity of sodium and potassium channels of, to changes in external pH, 185

Axons, squid giant, intracellular pH transients in, caused by CO_2, NH_3, and metabolic inhibitors, 91

–, squid, ionized calcium concentrations in, 433

B

Beat rate and electrical properties of embryonic chick heart cell aggregates, ultraviolet-induced alterations of, 27

Bicarbonate and halides, effects of, on chloride transport in human red blood cells, 223

Bilayer systems, lipid, nonelectrolyte diffusion across, 45

Bipolar, horizontal, and amacrine cells, and receptors, intracellular analysis of chloride-sensitive electrogenic properties of, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 639

Blood cells, red. *See* Erythrocytes.

Bronk, Detlev W., 1897–1975, obituary, 493

C

Calcium concentrations, ionized, in squid axons, 433

– ion, phosphorylation of red blood cell membrane during active transport of, 251

– ions in cardiac Purkinje fibers, control of action potential duration by, 599

– and magnesium, effects of, on side dependencies of Na and K on ouabain binding to red blood cell ghosts and control of Na transport by internal Mg, 547

– and sodium, role of intracellular, in light adaptation in retina of honey bee drone *(Apis mellifera, L.)*, 475

Capacitance and resistance of one transverse tubule, electromechanical coupling in tubular muscle fibers, 343

– of skeletal muscle fibers, effects of membrane potential on, 125

Carbon dioxide, NH_3, and metabolic inhibitors, intracellular pH transients in squid giant axons caused by, 91

Carbon dioxide transfer, a mechanism of, proton transport by phosphate diffusion, 773
Cardiac Purkinje fibers, control of action potential duration by calcium ions in, 599
Cell aggregates, embryonic chick heart, ultraviolet-induced alterations of beat rate and electrical properties of, 27
–, ganglion, receptive field organization based on chloride-free experiments, a model of, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 679
– mechanisms, chloride-dependent ganglion, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 661
– membrane, egg, of starfish, effect of cesium on potassium current during anomalous rectification of, 621
– membrane, Schwann, of squid nerve fibers, grayanotoxin, veratrine, and tetrodotoxin-sensitive sodium pathways in, 369
– R15, identified neurosecretory, of *Aplysia*, water regulation by presumptive hormone contained in, 113
– wall elastic modulus in marine alga *Halicystis parvula*, ion transport studies and determination of, 579
Cells (horizontal, bipolar, amacrine) and receptors, intracellular analysis of chloride-sensitive electrogenic properties of, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 639
–, red blood. *See* Erythrocytes.
Cellular, intra-, analysis of chloride-sensitive electrogenic properties of receptors, horizontal cells, bipolar cells, and amacrine cells, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 639
–, intra-, calcium and sodium, role of, in light adaptation in retina of honey bee drone *(Apis mellifera, L.)*, 475
–, intra-, pH transients in squid giant axons caused by CO_2, NH_3, and metabolic inhibitors, 91
Cesium, effect of, on potassium current during anomalous rectification of egg cell membrane of starfish, 621
Channel, sodium, of frog skeletal muscle, ionic selectivity of, 295
–, sodium, of frog skeletal muscle, kinetic and pharmacological properties of, 309
Channels of *Myxicola* giant axons, sodium and potassium, sensitivity of, to changes in external pH, 185
–, on and off, in mudpuppy retina, synaptic organization and ionic basis of, chloride-dependent ganglion cell mechanisms, 661
–, on and off, in mudpuppy retina, synaptic organization and ionic basis of, intracellular analysis of chloride-sensitive electrogenic properties of receptors, horizontal cells, bipolar cells, and amacrine cells, 639
–, on and off, in mudpuppy retina, synaptic organization and ionic basis of, a model of ganglion cell receptive field organization based on chloride-free experiments, 679
–, sodium, of axon membrane fragments isolated from lobster nerves, sodium flux through, 81
Chloride transport in human red blood cells, effects of halides and bicarbonate on, 223
Chloride-dependent ganglion cell mechanisms, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 661
Chloride-free experiments, a model of ganglion cell receptive field organization based on, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 679
Chloride-sensitive electrogenic properties of receptors, horizontal cells, bipolar cells, and amacrine cells, intracellular analysis of, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 639
Corrections, 819
Coupling, inhibitory, in *Limulus* retina, electrophysiological basis for spatial dependence of, 1

E

Egg cell membrane of starfish, effect of cesium on potassium current during anomalous rectification of, 621
Electrolyte, non-, diffusion across lipid bilayer systems, 45
Electrophysiological basis for the spatial dependence of the inhibitory coupling in the *Limulus* retina, 1
Embryonic chick heart cell aggregates, ultraviolet-induced alterations of beat

rate and electrical properties of, 27
Erythrocyte ghosts, ouabain binding to, and control of Na transport by internal Mg, effects of Mg and Ca on side dependencies of Na and K on, 547
– ghosts, reconstituted human, comparison of side-dependent effects of Na and K on orthophosphate-, UTP-, and ATP-promoted ouabain binding to, 527
– ghosts, reconstituted human, side-dependent effects of internal versus external Na and K on ouabain binding to, 497
– membrane and phloretin, interaction between, 381
– membrane, phosphorylation of, during active transport of Ca^{++}, 251
– membranes, dog, sodium permeability of, identification of regulatory sites, 563
Erythrocytes, human, effects of halides and bicarbonate on chloride transport in, 223
– of newborn pigs, kinetics of 3-*O*-methyl glucose transport in, 67
Escherichia coli, cation transport in, potassium transport mutants, 325
External versus internal Na and K, side-dependent effects of, on ouabain binding to reconstituted human red blood cell ghosts, 497
– pH, sensitivity of sodium and potassium channels of *Myxicola* giant axons to changes in, 185
Eye, *Limulus* lateral, putative synaptic mechanisms of inhibition in, 417

F

Facilitation and adaptation in barnacle photoreceptor, 235
Fiber, skeletal muscle, under voltage clamp, time-course of potential spread along, 165
Fibers, cardiac Purkinje, control of action potential duration by calcium ions in, 599
–, skeletal muscle, effects of membrane potential on capacitance of, 125
–, skeletal muscle, an improved Vaseline gap voltage clamp for, 265
–, tubular muscle, electromechanical coupling in, resistance and capacitance of one transverse tubule, 343
–, squid nerve, grayanotoxin, veratrine, and tetrodotoxin-sensitive sodium pathways in Schwann cell membrane of, 369

G

Ganglion cell mechanisms, chloride-dependent, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 661
– cell receptive field organization based on chloride-free experiments, a model of, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 679
Ghosts, reconstituted human red blood cell, comparison of side-dependent effects of Na and K on orthophosphate-, UTP-, and ATP-promoted ouabain binding to, 527
–, reconstituted human red blood cell, side-dependent effects of internal versus external Na and K on ouabain binding to, 497
–, red blood cell, ouabain binding to, and control of Na transport by internal Mg, effects of Mg and Ca on side dependencies of Na and K on, 547
Giant axons, *Myxicola*, sensitivity of sodium and potassium channels of, to changes in external pH, 185
– axons, squid, intracellular pH transients in, caused by CO_2, NH_3, and metabolic inhibitors, 91
Glucose, 3-*O*-methyl, transport in red blood cells of newborn pigs, kinetics of, 67
Grayanotoxin, veratrine, and tetrodotoxin-sensitive sodium pathways in Schwann cell membrane of squid nerve fibers, 369

H

Halicystis parvula, marine alga, ion transport studies and determination of cell wall elastic modulus in, 579
Halides and bicarbonate, effects of, on chloride transport in human red blood cells, 223
Heart cell aggregates, embryonic chick, ultraviolet-induced alterations of beat rate and electrical properties of, 27
Hepatocyte, rat, nonuniform distribution of sodium in, 469
Horizontal, bipolar, and amacrine cells, and receptors, intracellular analysis of chloride-sensitive electrogenic proper-

ties of, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 639
Hormone, presumptive, contained in identified neurosecretory cell R15 of *Aplysia*, water regulation by, 113
Hydrogen ion concentration, external, sensitivity of sodium and potassium channels of *Myxicola* giant axons to changes in external pH, 185
– ion concentration transients, intracellular, in squid giant axons caused by CO_2, NH_3, and metabolic inhibitors, 91

I

Inhibition in *Limulus* lateral eye, putative synaptic mechanisms of inhibition in, 417
Inhibitors, metabolic, CO_2, and NH_3, intracellular pH transients in squid giant axons caused by, 91
Inhibitory coupling in the *Limulus* retina, electrophysiological basis for the spatial dependence of, 1
Internal versus external Na and K, side-dependent effects of, on ouabain binding to reconstituted human red blood cell ghosts, 497
– Mg, control of Na transport by, and ouabain binding to red blood cell ghosts, effects of Mg and Ca on side dependencies of Na and K on, 547
Intracellular analysis of chloride-sensitive electrogenic properties of receptors, horizontal cells, bipolar cells, and amacrine cells, synaptic organization and ionic basis of on and off channels in mudpuppy retina, 639
– calcium and sodium, role of, in light adaptation in retina of honey bee drone *(Apis mellifera, L.)*, 475
– pH transients in squid giant axons caused by CO_2, NH_3, and metabolic inhibitors, 91

L

Lateral eye, *Limulus*, putative synaptic mechanisms of inhibition in, 417
Light adaptation in retina of honey bee drone *(Apis mellifera, L.)*, role of intracellular calcium and sodium in, 475
Limulus lateral eye, putative synaptic mechanisms of inhibition in, 417
– retina, inhibitory coupling in, electrophysiological basis for spatial dependence of, 1
Lipid bilayer systems, nonelectrolyte diffusion across, 45
– membranes, thin, effect of phloretin on permeability of, 749
– membranes, thin, inactivation of monazomycin-induced voltage-dependent conductance in, inactivation produced by long chain quaternary ammonium ions, 703
– membranes, thin, inactivation of monazomycin-induced voltage-dependent conductance in, inactivation produced by monazomycin transport through membrane, 731

M

Magnesium and calcium, effects of, on side dependencies of Na and K on ouabain binding to red blood cell ghosts and control of Na transport by internal Mg, 547
Man, red blood cell ghosts, reconstituted, comparison of side-dependent effects of Na and K on orthophosphate-, UTP-, and ATP-promoted ouabain binding to, 527
–, red blood cells, effects of halides and bicarbonate on chloride transport in, 223
–, red blood cells, reconstituted, side-dependent effects of internal versus external Na and K on ouabain binding to, 497
Membrane, egg cell, of starfish, effect of cesium on potassium current during anomalous rectification of, 621
– fragments, axon, isolated from lobster nerves, sodium flux through sodium channels of, 81
– potential, effects of, on capacitance of skeletal muscle fibers, 125
–, red blood cell, and phloretin, interaction between, 381
–, red blood cell, phosphorylation of, during active transport of Ca^{++}, 251
–, Schwann cell, of squid nerve fibers, grayanotoxin, veratrine, and tetrodotoxin-sensitive sodium pathways in, 369
Membranes, dog red blood cell, sodium permeability of, identification of regulatory sites, 563
–, thin lipid, effect of phloretin on permeability of, 749
–, thin lipid, inactivation of monazomy-

cin-induced voltage-dependent conductance in, inactivation produced by long chain quaternary ammonium ions, 703
–, thin lipid, inactivation of monazomycin-induced voltage-dependent conductance in, inactivation produced by monazomycin transport through membrane, 731
–, thin spherical, unstirred layer corrections for, 61
Metabolic inhibitors, CO_2, and NH_3, intracellular pH transients in squid giant axons caused by, 91
Methyl, 3-*O*-, glucose transport, kinetics of, in red blood cells of newborn pigs, 67
Monazomycin-induced voltage-dependent conductance in thin lipid membranes, inactivation produced by long chain quaternary ammonium ions, 703
– voltage-dependent conductance in thin lipid membranes, inactivation produced by monazomycin transport through membrane, 731
Muscle fiber, skeletal, under voltage clamp, time-course of potential spread along, 165
– fibers, skeletal, effects of membrane potential on capacitance of, 125
– fibers, skeletal, an improved Vaseline gap voltage clamp for, 265
– fibers, tubular, electromechanical coupling in, resistance and capacitance of one transverse tubule, 343
–, frog skeletal, ionic selectivity of sodium channel of, 295
–, frog skeletal, kinetic and pharmacological properties of sodium channel of, 309
–, normal and detubulated frog sartorius, density and distribution of tetrodotoxin receptors in, 399
Mutants, potassium transport, cation transport in *Escherichia coli*, 325
Myxicola giant axons, sensitivity of sodium and potassium channels of, to changes in external pH, 185

N

Nerve fibers, squid, grayanotoxin, veratrine, and tetrodotoxin-sensitive sodium pathways in Schwann cell membrane of, 369
Nerves, lobster, sodium flux through sodium channels of axon membrane fragments isolated from, 81
Neuron, R15, of *Aplysia*, patterns of proteins synthesized in, temporal studies and evidence for processing, 691
Neurosecretory cell R15 of *Aplysia*, water regulation by presumptive hormone contained in, 113
Nonelectrolyte diffusion across lipid bilayer systems, 45

O

Obituary, Detlev W. Bronk, 1897–1975, 493
Off and on channels in mudpuppy retina, synaptic organization and ionic basis of, chloride-dependent ganglion cell mechanisms, 661
– and on channels in mudpuppy retina, synaptic organization and ionic basis of, intracellular analysis of chloride-sensitive electrogenic properties of receptors, horizontal cells, bipolar cells, and amacrine cells, 639
– and on channels in mudpuppy retina, synaptic organization and ionic basis of, a model of ganglion cell receptive field organization based on chloride-free experiments, 679
On and off channels in mudpuppy retina, synaptic organization and ionic basis of, chloride-dependent ganglion cell mechanisms, 661
– and off channels in mudpuppy retina, synaptic organization and ionic basis of, intracellular analysis of chloride-sensitive electrogenic properties of receptors, horizontal cells, bipolar cells, and amacrine cells, 639
– and off channels in mudpuppy retina, synaptic organization and ionic basis of, a model of ganglion cell receptive field organization based on chloride-free experiments, 679
Orthophosphate-, UTP-, and ATP-promoted ouabain binding to reconstituted human red blood cell ghosts, comparison of side-dependent effects of Na and K on, 527
Ouabain binding to reconstituted human red blood cell ghosts, orthophosphate-, UTP-, and ATP-promoted, comparison of side-dependent effects of Na and K on, 527

Ouabain binding to red blood cell ghosts and control of Na transport by internal Mg, effects of Mg and Ca on side dependencies of Na and K on, 547
– binding, side-dependent effects of internal versus external Na and K on, to reconstituted human red blood cell ghosts, 497

P

Permeability, sodium, of dog red blood cell membranes, identification of regulatory sites, 563
– of thin lipid membranes, effect of phloretin on permeability of, 749
Phloretin, effect of, on permeability of thin lipid membranes, 749
– and the red blood cell membrane, interaction between, 381
Phosphate diffusion, proton transport by, a mechanism of facilitated CO_2 transfer, 773
Phosphate-promoted, adenosine tri-, orthophosphate-, and UTP-promoted ouabain binding to reconstituted human red blood cell ghosts, comparison of side-dependent effects of Na and K on, 527
–, ortho-, UTP-, and ATP-promoted ouabain binding to reconstituted human red blood cell ghosts, comparison of side-dependent effects of Na and K on, 527
–, uridine tri-, orthophosphate-, and ATP-promoted ouabain binding to reconstituted human red blood cell ghosts, comparison of side-dependent effects of Na and K on, 527
Phosphorylation of red blood cell membrane during active transport of Ca^{++}, 251
Photoreceptor, barnacle, adaptation and facilitation in, 235
Potassium current and effect of cesium on this current during anomalous rectification of egg cell membrane of starfish, 621
– and sodium channels of *Myxicola* giant axons, sensitivity of, to changes in external pH, 185
– and sodium, comparison of side-dependent effects of, on orthophosphate-, UTP-, and ATP-promoted ouabain binding to reconstituted human red blood cell ghosts, 527
Potassium and sodium, effects of Mg and Ca on side dependencies of, on ouabain binding to red blood cell ghosts and control of Na transport by internal Mg, 547
– and sodium, internal versus external, side-dependent effects of, on ouabain binding to reconstituted human red blood cell ghosts, 497
– transport mutants, cation transport in *Escherichia coli*, 325
Proteins synthesized in R15 neuron of *Aplysia*, patterns of, temporal studies and evidence for processing, 691
Proton transport by phosphate diffusion, a mechanism of facilitated CO_2 transfer, 773
Purkinje fibers, cardiac, control of action potential duration by calcium ions in, 599

R

R15, identified neurosecretory cell, of *Aplysia*, water regulation by presumptive hormone contained in, 113
– neuron of *Aplysia*, patterns of proteins synthesized in, temporal studies and evidence for processing, 691
Red blood cells. *See* Erythrocytes.
Resistance and capacitance of one transverse tubule, electromechanical coupling in tubular muscle fibers, 343
Retina of honey bee drone *(Apis mellifera, L.)*, role of intracellular calcium and sodium in light adaptation in, 475
–, *Limulus*, inhibitory coupling in, electrophysiological basis for spatial dependence of, 1
–, mudpuppy, synaptic organization and ionic basis of on and off channels in, chloride-dependent ganglion cell mechanisms, 661
–, mudpuppy, synaptic organization and ionic basis of on and off channels in, intracellular analysis of chloride-sensitive electrogenic properties of receptors, horizontal cells, bipolar cells, and amacrine cells, 639
–, mudpuppy, synaptic organization and ionic basis of on and off channels in, a model of ganglion cell receptive field organization based on chloride-free experiments, 679
–, squid, distribution of rhodopsin and retinochrome in, 791
Retinochrome and rhodopsin in squid

retina, distribution of, 791
Rhodopsin and retinochrome in squid retina, distribution of, 791

S

Sartorius muscle, normal and detubulated frog, density and distribution of tetrodotoxin receptors in, 399
Schwann cell membrane of squid nerve fibers, grayanotoxin, veratrine, and tetrodotoxin-sensitive sodium pathways in, 369
Selectivity, ionic, of sodium channel of frog skeletal muscle, 295
Sensory stimuli, signal transformation with pairing of, 197
Shear forces in arterial branching, role of, 213
Side dependencies of Na and K, effects of Mg and Ca on, on ouabain binding to red blood cell ghosts and control of Na transport by internal Mg, 547
Side-dependent effects of internal versus external Na and K on ouabain binding to reconstituted human red blood cell ghosts, 497
– effects of Na and K, comparison of, on orthophosphate-, UTP-, and ATP-promoted ouabain binding to reconstituted human red blood cell ghosts, 527
Signal transformation with pairing of sensory stimuli, 197
Skeletal muscle fiber under voltage clamp, time-course of potential spread along, 165
– muscle fibers, effects of membrane potential on capacitance of, 125
– muscle fibers, an improved Vaseline gap voltage clamp for, 265
– muscle, frog, kinetic and pharmacological properties of sodium channel of, 309
– muscle, frog, ionic selectivity of sodium channel of, 295
Sodium and calcium, role of intracellular, in light adaptation in retina of honey bee drone *(Apis mellifera, L.)*, 475
– channel of frog skeletal muscle, ionic selectivity of, 295
– channel of frog skeletal muscle, kinetic and pharmacological properties of, 309
– channels of axon membrane fragments isolated from lobster nerves, sodium flux through, 81
– pathways, tetrodotoxin-sensitive, in Schwann cell membrane of squid nerve fibers, grayanotoxin, and veratrine, 369
– permeability of dog red blood cell membranes, identification of regulatory sites, 563
– and potassium channels of *Myxicola* giant axons, sensitivity of, to changes in external pH, 185
– and potassium, comparison of side-dependent effects of, on orthophosphate-, UTP-, and ATP-promoted ouabain binding to reconstituted human red blood cell ghosts, 527
– and potassium, effects of Mg and Ca on side dependencies of, on ouabain binding to red blood cell ghosts and control of Na transport by internal Mg, 547
– and potassium, internal versus external, side-dependent effects of, on ouabain binding to reconstituted human red blood cell ghosts, 497
– in rat hepatocyte, nonuniform distribution of, 469
Synaptic mechanisms, putative, of inhibition in *Limulus* lateral eye, 417
– organization and ionic basis of on and off channels in mudpuppy retina, chloride-dependent ganglion cell mechanisms, 661
– organization and ionic basis of on and off channels in mudpuppy retina, intracellular analysis of electrogenic properties of receptors, horizontal cells, bipolar cells, and amacrine cells, 639
– organization and ionic basis of on and off channels in mudpuppy retina, a model of ganglion cell receptive field organization based on chloride-free experiments, 679

T

Tetrodotoxin receptors in normal and detubulated frog sartorius muscle, density and distribution of, 399
Tetrodotoxin-sensitive sodium pathways in Schwann cell membrane in squid nerve fibers, grayanotoxin, and veratrine, 369
Time-course of potential spread along a skeletal muscle fiber under voltage clamp, 165
Transients, intracellular pH, in squid

giant axons caused by CO_2, NH_3, and metabolic inhibitors, 91
Transverse tubule, resistance and capacitance of one, electromechanical coupling in tubular muscle fibers, 343
Triphosphate-promoted, adenosine, orthophosphate-, and UTP-promoted ouabain binding to reconstituted human red blood cell ghosts, comparison of side-dependent effects of Na and K on, 527
—, uridine, orthophosphate-, and ATP-promoted ouabain binding to reconstituted human red blood cell ghosts, comparison of side-dependent effects of Na and K on, 527
Tubular muscle fibers, electromechanical coupling in, resistance and capacitance of one transverse tubule, 343
Tubule, one transverse, resistance and capacitance of, electromechanical coupling in tubular muscle fibers, 343

U

Ultraviolet-induced alterations of beat rate and electrical properties of embryonic chick heart cell aggregates, 27
Uridine triphosphate-, orthophosphate-, and ATP-promoted ouabain binding to reconstituted human red blood cell ghosts, comparison of side-dependent effects of Na and K on, 527

V

Vaseline gap voltage clamp, improved, for skeletal muscle fibers, 265
Veratrine, grayanotoxin, and tetrodotoxin-sensitive sodium pathways in Schwann cell membrane of squid nerve fibers, 369

W

Water regulation by a presumptive hormone contained in identified neurosecretory cell R15 of *Aplysia*, 113
